[57] **ABSTRACT**

A clothing garment is constructed having a lower covering portion that, when worn, is designed to cover the wearer's body generally below the waist, and a permanent back panel that is fixed to the lower covering portion and covers the back of the wearer's torso region. A replaceable front panel is provided having a releasable fastening system that enables it to be attached releasably to the lower body and back portions such that, when worn, the replaceable front panel appears as an integrated panel of the garment, but yet is detachable therefrom and may be interchanged with similar constructed front panels to change the look of the garment or when a front panel becomes soiled. The construction is particularly adapted for children's clothing.
